“ This transformation is particularly significant for young people from rural and low-income communities, offering them a genuine path out of unemployment and poverty ”

Rolf Olsen
Founder, KwaXolo Impact
Norway

Letter from Founder

Dear students,

Welcome to the KwaXolo Impact challenge!

I am proud to invite you to this competition. It represents a real opportunity to drive meaningful digital transformation across nine secondary schools in KwaZulu-Natal, South Africa, directly impacting the approximately 6,000 students enrolled there today. Beyond that, both current and future students at these schools will build the digital skills they need to fill existing roles or create new opportunities for themselves in South Africa's evolving economy. This transformation is particularly significant for young people from rural and low-income communities, offering them a genuine path out of unemployment and poverty.

Your unique contribution lies in helping identify the most cost-effective and educationally impactful approaches to carrying out this kind of Digital Transformation. We are talking about lasting change, both immediate and long-term, in skills development, with effects that reach beyond the KwaXolo area and have the potential to inspire similar efforts across South Africa.

South Africa's public schools operate under significant resource constraints, and public institutions face a considerable trust deficit when it comes to service delivery and financial accountability. Public-Private Partnerships, however, command strong credibility and confidence. The collaboration between KwaXolo Impact, a small but dedicated NGO, and the public school system in KwaZulu-Natal is a prime example of this model in action. The work you contribute through this competition will therefore be applied within a framework that offers the greatest possible chance of genuine, sustainable social impact.

Thank you for your commitment, and for the ideas and solutions you bring to the table.

Warm regards,
Rolf Olsen
Dr. BA
KwaXolo Impact

It started with one kindergarten.

1,247
staff trained monthly

72,583
children supported

359
kindergartens built

In 2005, HIV/AIDS was devastating rural KwaZulu-Natal. Two Norwegian families, Olsen and Engebu, were on holiday in the area when the headmaster of Mlonde High School and the pastor of Gamalakhe Baptist Church approached them with a request: would they help raise 30,000 Rand to build a kindergarten for the orphaned children of the community?

The families accepted. Back home in Norway, they launched a fundraising campaign called Give your birthday gift to Gamalakhe. The first kindergarten opened its doors shortly after. It became Impande.

From there, the work grew one village at a time. New kindergartens built. Local staff trained to run them. Daily meals for children who would otherwise go without. A board built in Norway to manage the funds, and a team built in KwaZulu-Natal to run the operations. Twenty years later, Impande supports tens of thousands of children across rural KZN and trains over a thousand kindergarten staff every month - all built on three principles that have not changed since 2005: training, accountability, and habits that last.

Impande continues this work today - building kindergartens, training staff, expanding its reach. But the first children Impande supported are now grown up, and a new question has emerged: what happens after school? That is why Rolf founded KwaXolo Impact in 2024. Impande plants the seed. KwaXolo nurtures the growth.

But the children Impande supported in 2005 are now young adults. They are 18, 19, 20 years old. They have grown up in communities where the kindergartens work, where the values are strong, where the local trust is real and where there are still no jobs. These are not people without ambition. They are people without infrastructure. They want to work. They want to build. The problem is that almost everything they could build requires capital they do not have. A bakery needs a kitchen and an oven. A farm needs land and seeds. That capital does not exist and cannot be borrowed.

There is one exception. In 2026, there is exactly one kind of work where the barrier to entry is not capital, but skill. Digital work. A laptop, an internet connection, and the ability to use them - that is the entire required infrastructure. KwaXolo Impact was built to give the children of Impande access to that one open door, before the AI wave makes the gap permanent. They are not waiting for charity. They are waiting for the door to open.

KwaXolo Builds the Bridge

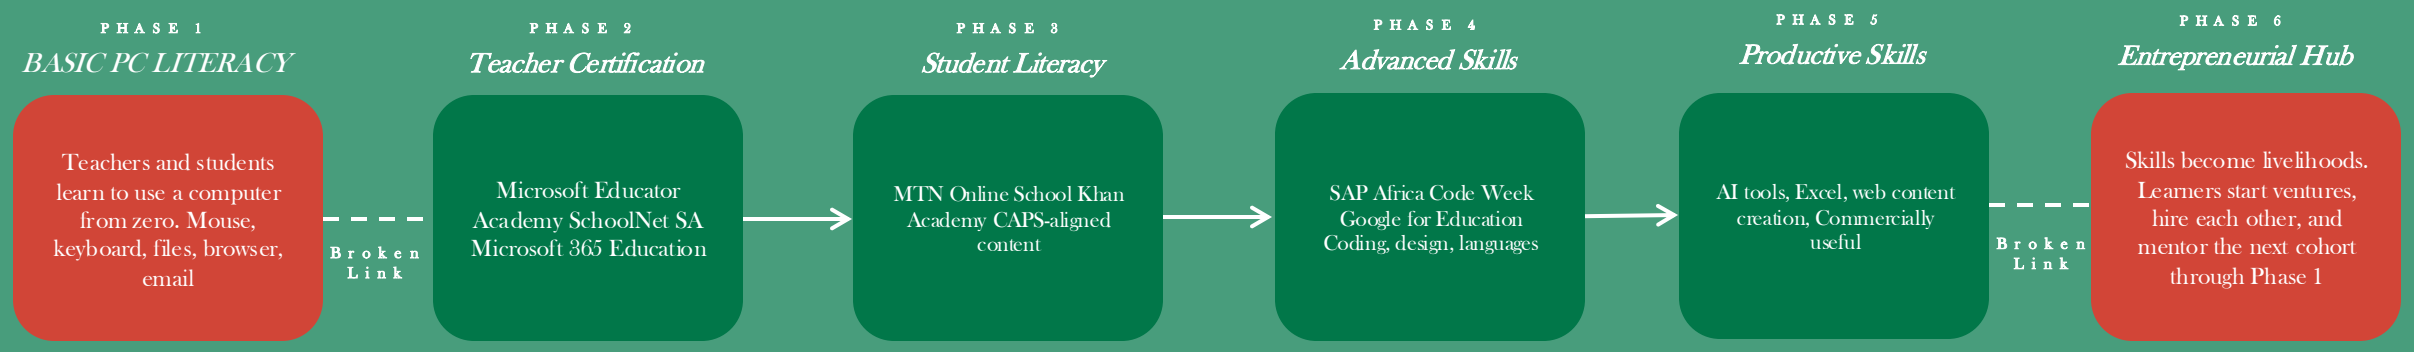
South Africa has a remarkable digital education ecosystem. Microsoft, MTN, Google, Khan Academy, and dozens of others deliver world-class learning content. Most of it is free.

None of it works for KwaXolo today. Every platform assumes the user already knows how to open a browser, create an account, and type on a keyboard. The journey from zero to enterprise runs through six phases.

KwaXolo is active in only two of them. Phase 1, where we build basic PC literacy from nothing. And Phase 6, where digital skills become real livelihoods. The four middle phases are carried by the global ecosystem - free, proven, already running.

But the real opportunity is bigger than employment. The young people of KwaXolo have something the rest of the world does not: they have lived problems most of us cannot even see. They know what is broken in their communities, what their neighbours need, what would actually work where they live. We do not.

Once a young person in KwaXolo has the digital tools we take for granted, she does not just become someone who can take jobs from foreign companies. She becomes someone who can see opportunities in her own community that no outsider has ever seen — and who now has the means to build solutions to them.



Introduction to the Case

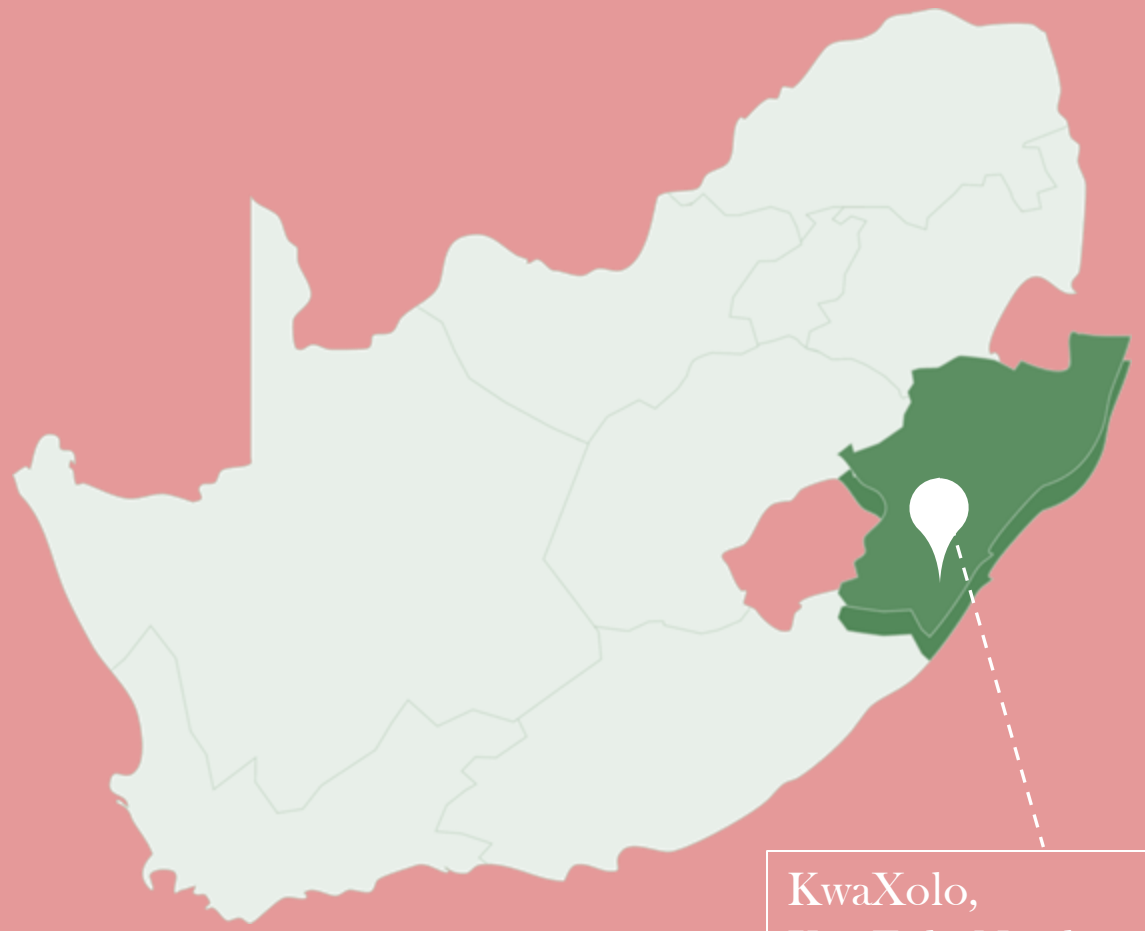
Welcome to KwaXolo

Rural KwaXolo, located in the KwaZulu-Natal province of South Africa, is home to a tightly knit and culturally rich community shaped by strong traditions and local identity. Despite these strengths, the region faces persistent structural economic challenges that have limited inclusive development and upward mobility for much of its population.

Like many rural areas in Sub-Saharan Africa, KwaXolo operates within a constrained economic landscape characterized by limited industrial activity, low capital inflows, and a high reliance on public services and informal livelihoods. Formal employment opportunities are scarce, particularly for younger generations, and economic activity is largely fragmented across small-scale trade, subsistence activity, and informal micro-enterprises.

Demographic dynamics further amplify these challenges. A growing youth population enters the labor market each year, yet the local economy has struggled to absorb new entrants. As a result, many young people face a stark choice between migrating to urban centers in search of opportunity or remaining in a local environment with limited pathways to stable income generation. This dynamic has contributed to cycles of outmigration, dependency, and constrained regional growth.

At the same time, the region is not without potential. Strong social cohesion, cultural resilience, and emerging local initiatives suggest that KwaXolo possesses foundational elements that could support a different development trajectory, provided that structural economic barriers can be addressed.



KwaXolo,
KwaZulu-Natal,
South Africa

An Economy Without Engines

A rural region in KwaZulu-Natal shaped by structural constraints and untapped potential.

Youth Unemployment & Poverty Traps

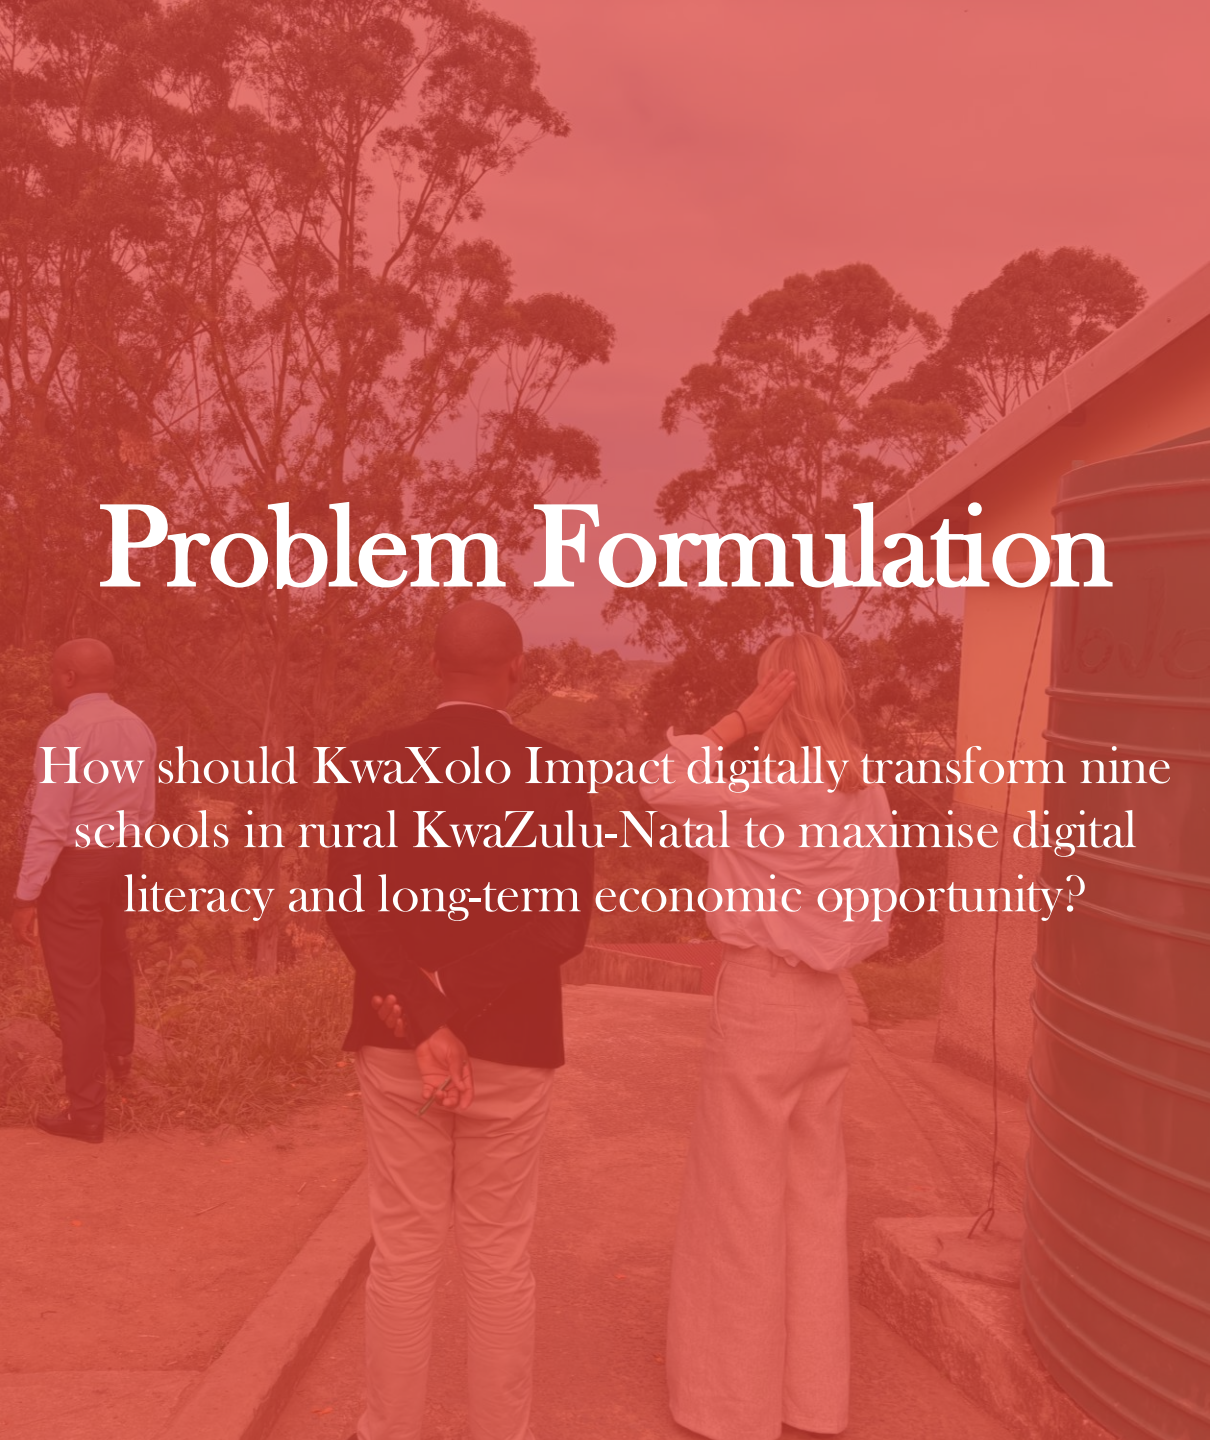
With youth unemployment exceeding 60%, the majority of young people in the KwaXolo valley face a stark choice: migrate to urban centres or remain in a local economy with limited formal job prospects. This cycle perpetuates poverty and erodes the community's long-term human capital base.

The Limits of Traditional Aid

Decades of donor-funded interventions, however well-intentioned, have created dependency rather than agency. Infrastructure projects and welfare transfers address symptoms; they do not create the economic structures that generate sustained income and opportunity.

The Shift Toward Entrepreneurship-Led Development

The most durable path to rural economic transformation is local enterprise. When community members own businesses, income stays local, employment is created, and economic dignity is restored. A central piece in this puzzle is establishing a well functional IT infrastructure and adequate upskilling.



Problem Formulation

How should KwaXolo Impact digitally transform nine schools in rural KwaZulu-Natal to maximise digital literacy and long-term economic opportunity?

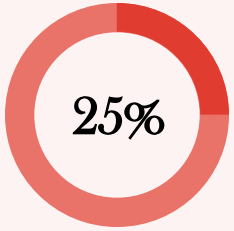
Impact Metrics

You must adhere to the following criteria in your solution:

Reach & adoption	How can the platform realistically onboard teachers and students across all 9 schools, accounting for varying levels of digital literacy and infrastructure readiness?
Autonomy & sustainability	How does the solution continue to function and deliver value without ongoing external facilitation or technical support?
Teacher enablement	To what extent does the solution equip educators to independently use and teach digital tools, and how is this progress measured?
Student progression	How does the platform structure a clear pathway from zero digital literacy to skills that are relevant for employment or new venture creation?
Economic impact	What is the realistic long-term economic return on the programme investment, and how would you measure it?

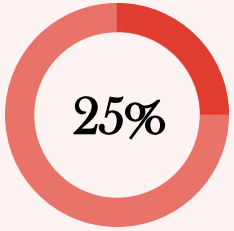
Evaluation Criteria

Your solutions will be evaluated on the following criteria



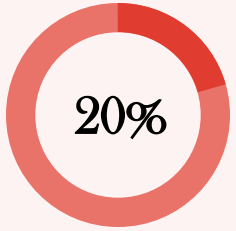
Analysis

Is the solution holistic and addresses potential gaps in the data and information given?



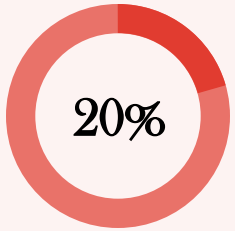
Solution

To what degree does the proposed solution meet the impact metrics?



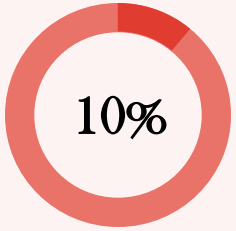
Creativity

How novel is the solution compared to the most straightforward answers?



Feasibility

Would the plan be able to be implemented if it is chosen as the winning contribution?



Communication

Is the solution presented, visualised, and communicated in a clear concise manner?

One overall winner, two subcategories

The judgement covers both a strategic and technical track. The judges will choose one solution that either fits all categories the best, or several. The technical solution will not be evaluated on the technical complexity, but rather the design thinking and potential value creation

Overall Winner

Best Strategy Solution

Best Technical Solution

Two-Part Deliverable

Strategy & Implementation Roadmap

Present a phased transformation plan that carefully considers the presented data. Special consideration should be connected to the evaluation criteria how KwaXolo Impact should best move forward with the Digital Transformation Project.

Presentation format is optional – either through Lovable slides, PowerPoint, or any other media.

There will be a 10-minute cap on your presentation including a short demo of the MVP.

Learning Platform MVP

We ask you to deliver a prototype of a scalable solution to enhance the digital literacy at the schools. This is not a finished product, but a proof of concept. Anyone can build with Lovable, and a digital solution is the only realistic path that is scalable.

Using the discount code, you will receive 100 credits, which is enough to build a working prototype if used carefully.

If you are new to the tool, we got you covered! Many are well experienced in our team, so ask for help.

Two weeks to make an impact

April 16th

Kick off the challenge with an inspiring intro session hosted at Microsoft's Lyngby office. Meet your fellow participants, learn about the case, and get ready to make an impact.

By end of session: team formed, roles assigned, initial research plan defined.

+ free dinner

April 16th – 22nd

Dive into research. Map the problem space. Sketch your first solution. Start building.

The more you know going into April 22, the more you get out of the mentors. Come prepared.

Target by April 22: working hypothesis, early MVP prototype, clear questions.

April 22nd

A full working session at Station with hands-on mentor support.

Top operators, founders, and strategists will spend the evening helping you stress-test ideas, refine your MVP, and answer the questions you've been sitting with.

This is the single biggest leverage point in the calendar. Use it.

+ free dinner

April 22nd - 29th

Take everything from the mentor session and turn it into something finished.

By now you should know what you're building, why it matters, and how to pitch it. The remaining work is making it sharp.

Target by April 29: working MVP, clear strategy, polished pitch.

April 29th

The grand finale - teams present their solutions to a panel of judges.

+ free dinner

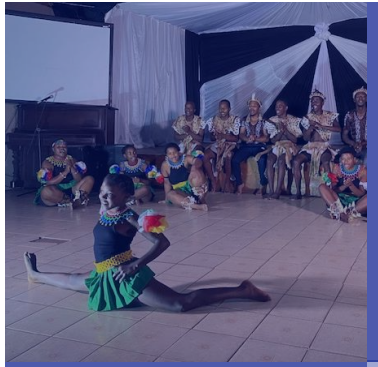
This is KwaXolo Impact

This is KwaXolo Impact

KwaXolo Impact is a Norwegian-founded NGO with a long-term presence in the rural KwaXolo community of South Africa. Through years of sustained engagement, the organisation has built deep trust with local stakeholders, schools, and community leaders, a critical asset for driving structural change.

Its portfolio spans school transformation, vocational training, infrastructure investment, and STEAM programmes, all aimed at improving education, youth employment, and community resilience. This track record has positioned KwaXolo not just as a development actor, but as a trusted platform for lasting social and economic transformation in the region.



32 Schools are supported in underserved communities

DKK 2M Raised Since Inception (2025)

99.5% Of All Funds Go Direct to Cause, Securing High CSR

7 New Ventures Launched Through the Entrepreneurial Hub

50+ Volunteers across Norway, Denmark, and South Africa

60% Unemployment Rates among Youths

20+ Years of Experience from Norwegian NGOs

Find More Information at kwaxolo.no & kwaxolo.dk

Board of Directors – KwaXolo Impact Norway

Rolf Olsen

Founder of KwaXolo Impact, with deep roots in the KwaZulu-Natal region since 2005 and extensive experience in local education and community development.

Ann Kristin Vårdal Olsen

Procurement advisor who became engaged with KwaXolo after visiting local schools and witnessing educational conditions firsthand.

Thor Christian Olsen

Partner at AIDER with firsthand insight into everyday school life in the KwaXolo region, gained through direct visits to local schools.

Rune Haukeland

Retired teacher with extensive experience in KwaXolo, currently leading a vocational education project at Mcuschwa High School.

Jan Terje Augestad

High school teacher driving collaboration between Norwegian and KwaXolo upper secondary schools.

Marianne Høva Rustberggard

Lawyer and academic with nonprofit and board experience, focused on building strong institutional dialogue.

Lars Woodhouse

Engineer and project manager with hands-on involvement across multiple KwaXolo projects, contributing technical and operational expertise

Pia Engemoen Aasland

CBS student involved in KwaXolo initiatives since 2018, including on-the-ground project visits, and currently serving as board member of KwaXolo Impact Denmark & Norway.

Lisbeth Dyrberg

Former CEO of the Student Welfare Organisation in Oslo (SiO), now actively involved in KwaXolo Impact's strategic initiatives.

Trude Kolle Martini

Department Director at the Norwegian Courts Administration, bringing strategic leadership experience and firsthand insight gained through visits to KwaXolo.

Local Network & Resources

Caleb Phehlukwayo

Former school principal with over three decades in education, retiring in 2016. Brings deep community trust and institutional knowledge, currently serving as Deputy Chair of the local school committee.

Victor Jaca

CEO of the Msenti Hub and the operational backbone of the local ecosystem. Drives business registration, early-stage venture development, and day-to-day coordination - making him the central node for on-the-ground execution.

Thubelihle Sikobi

IT Consultant and digital transformation lead overseeing technology infrastructure across 9 high schools. Ensures the Hub's systems are operational and scalable across the region's educational network.

Dolly Dlezi

Accountant and financial operations specialist based at the Msenti Hub. Provides bookkeeping, compliance, and financial setup support - critical for ensuring new ventures are structured for growth from day one.

Chief Inkosi Xolo

Traditional Zulu chief and community authority representing the Xolo people. Bridges local governance and district institutions, and plays a strategic leadership role in KwaXolo Impact - providing legitimacy and access that no external partner could replicate.

The Entrepreneurial Hub

Competences & Resources

Legal Support

- Two in-house lawyers on the Norwegian board
- Legal quality assurance via partners in South Africa
- Contracts and agreements reviewed when needed

IT Competence

- Operational tech support and digital coordination
- IT consultant & founder leads digital transformation of 9 high schools Supports HUB systems and OU initiatives
- IT Training Consultant with basic IT literacy training Runs courses at Msenti Entrepreneurship Hub

Entrepreneurship Support

- Business registration and early venture support
- External support via SEDA (Small Enterprise Development Agency), Port Shepstone

Finance Support

- Provides bookkeeping and financial setup for new ventures
- Financial loans, etc

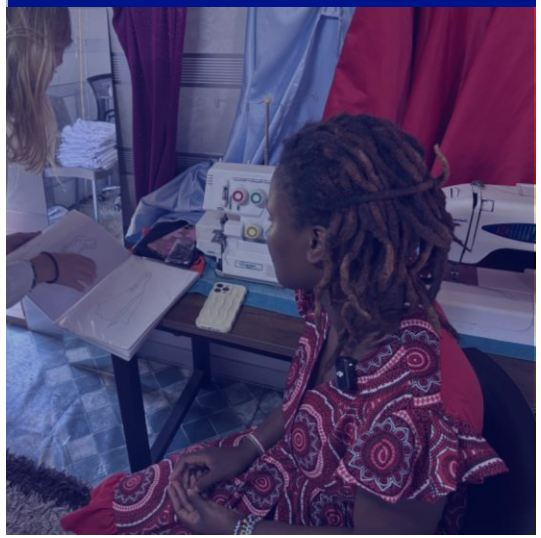
Entrepreneurialism in KwaXolo

Natural Business Instinct

The youth in KwaXolo don't wait for opportunities; they create them. From a young age, many start small businesses selling chips and sweets at school, proving a natural hunger for trade and self-reliance that exists across the community.

Hlobisile Pearl Studios

One of the Hub's first supported ventures, Hlobisile Pearl Studios demonstrated that local creative talent combined with structured support can generate real market traction. The venture provides photography, event documentation, and visual content services — initially to schools and community events within the KwaXolo network.



Two new ventures have received investment loans

Thabo Shude has just opened 1LT Bakery. Samke Jaca and Ntokozo Gwacela will soon open Inkify, a printer store. This picture was provided during the celebration with cake and smiles.

Active Projects

Digital Transformation of nine high schools in KwaXolo

From Jan 1st 2026, KwaXolo Impact began the digital transformation project-initial groundwork is underway, but rollout is in its earliest phase.

Water Projects

6/32 high schools were supplied with sanitary water in 2025. Fundraising is ongoing to finance the renovation of the remaining target schools.

Vegetable and Kale supports job creation

The goal is to create 10-40 employments, while also following UN's 8th sustainability goal.

Practical workshops

Public education is heavily theoretical, neglecting the need for practical skills, contributing to a 30-50% dropout rate

Phatwa High School

In a completely obliterated building from the Apartheid-era, 1320 students share 21 classrooms. Many students inevitably do not fit, leading to increased drop out.

Fabric hall becomes course and culture center for youth

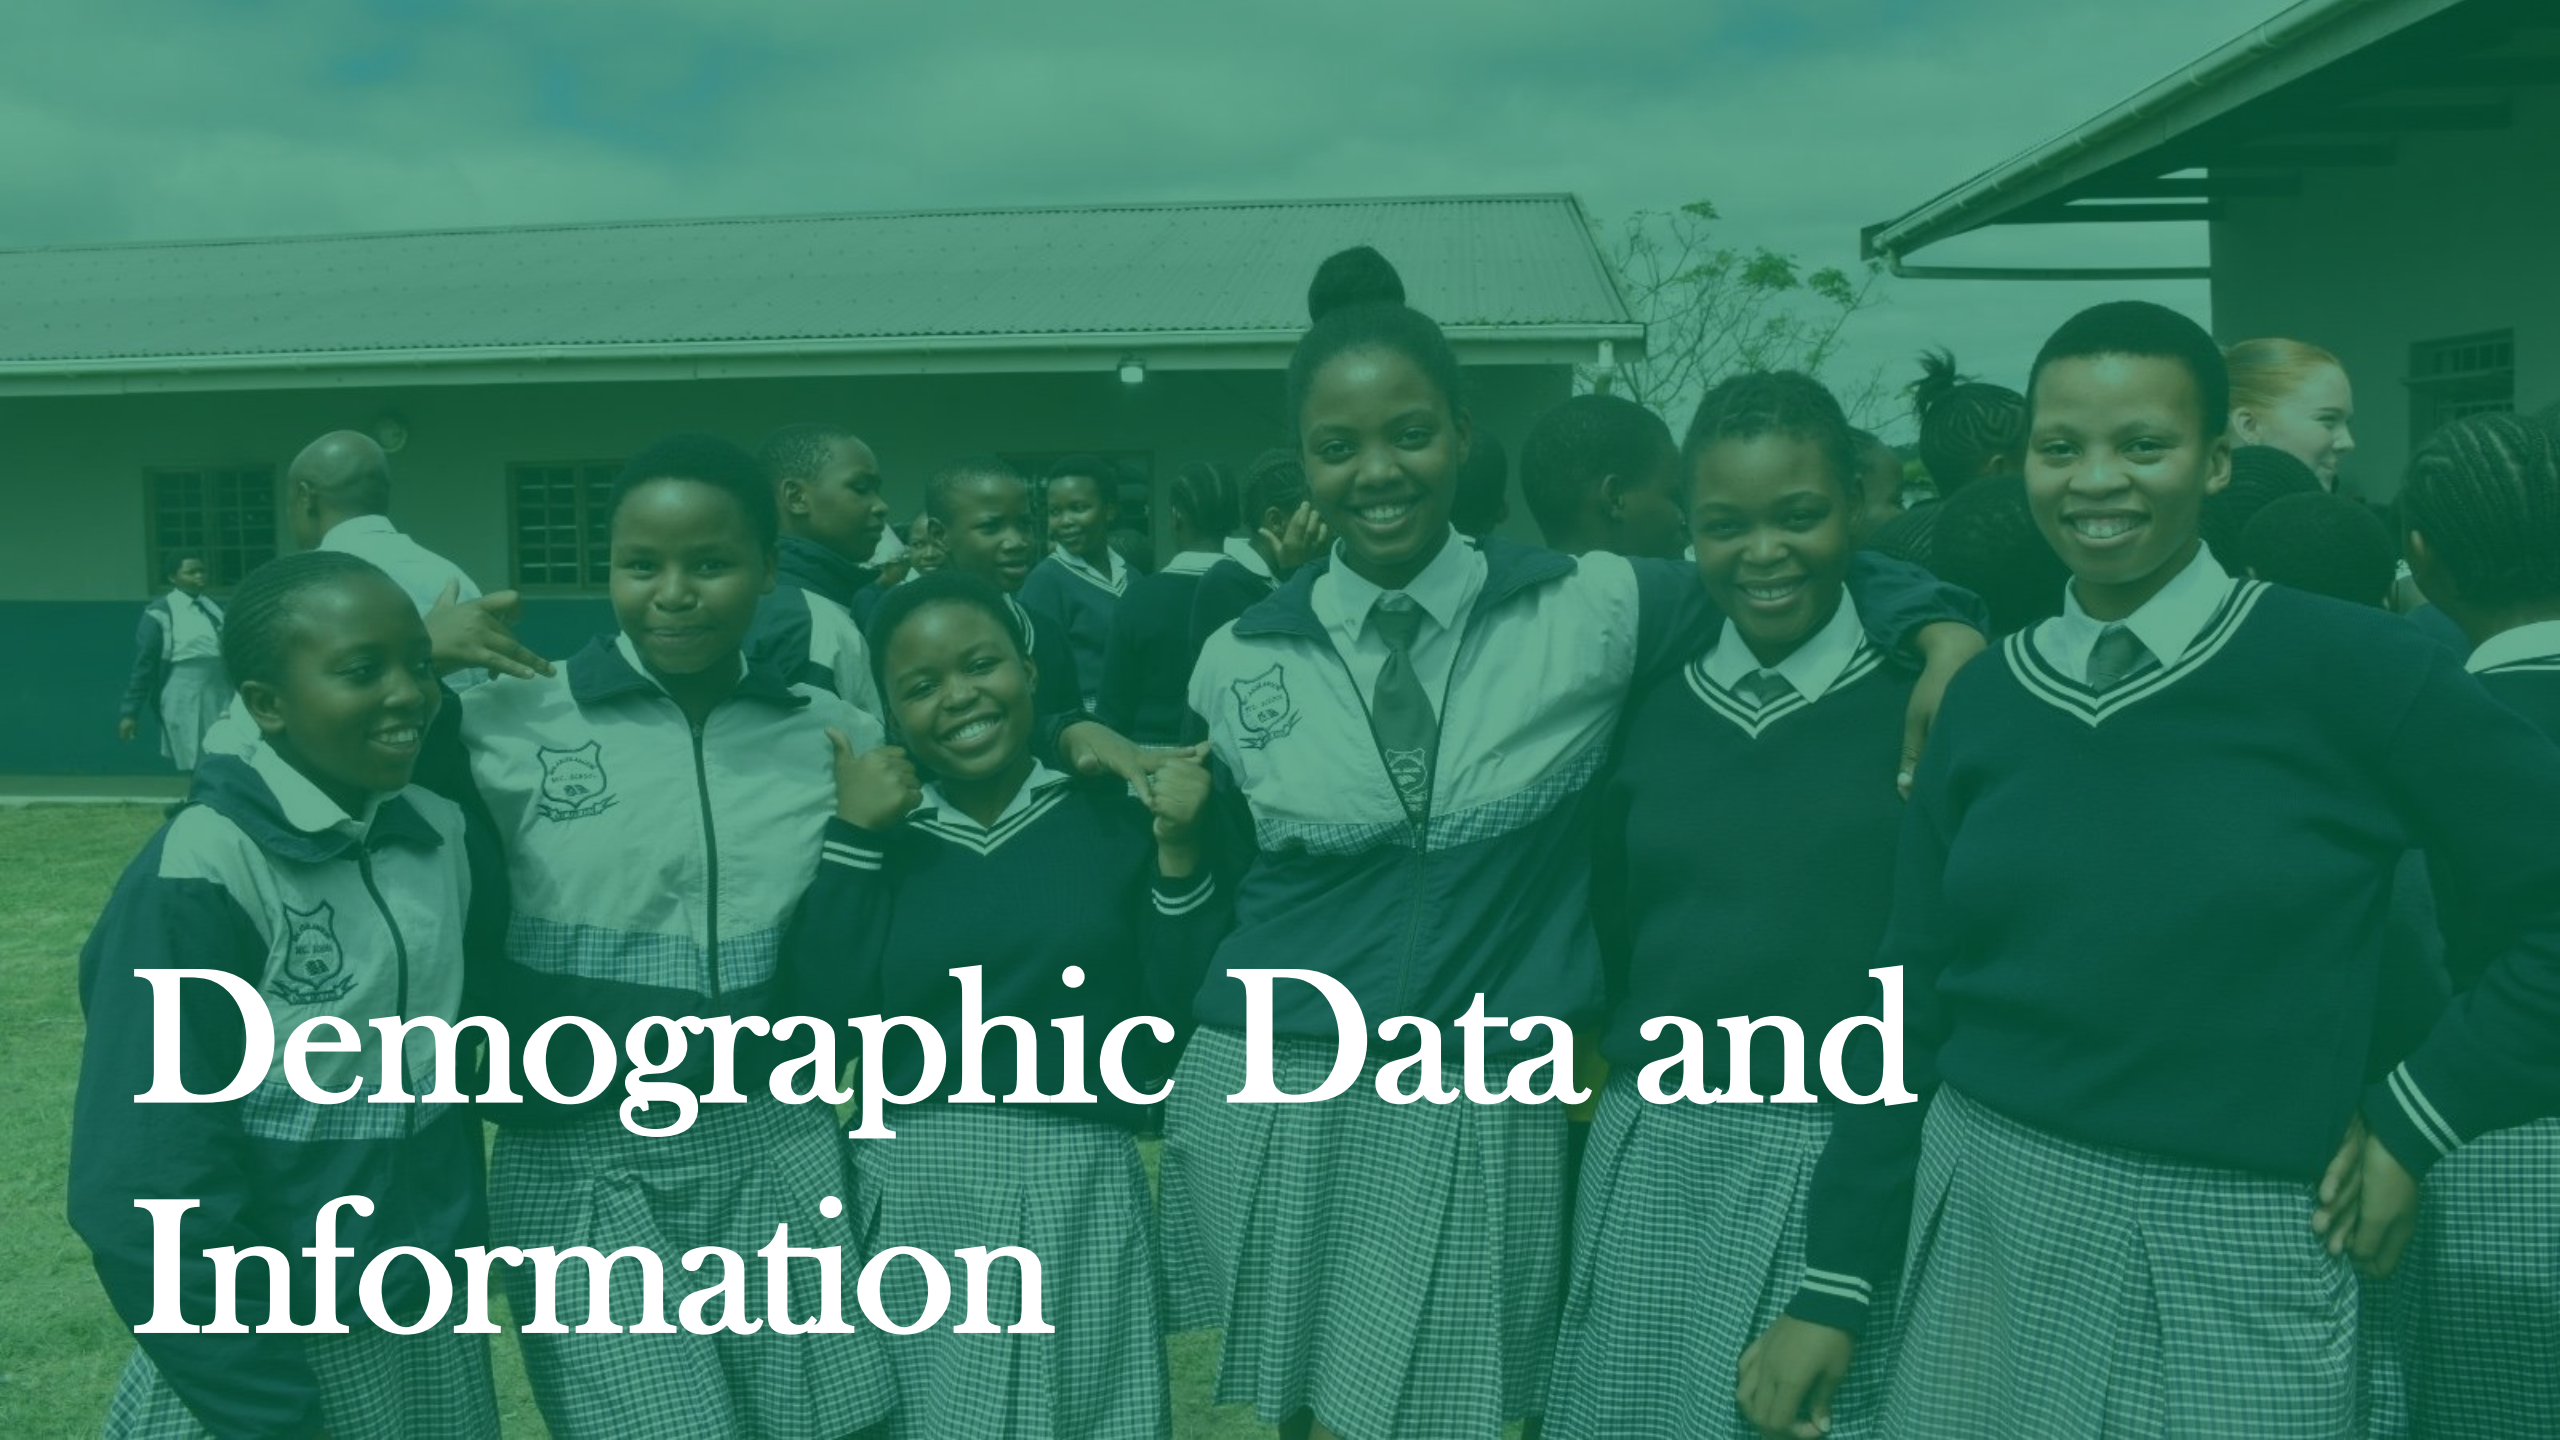
Sponsors have many years supported the development of this youth project in Munster, South of KwaXolo. Approximately 50 youth in financial hardship will get access.

Entrepreneurial hub

The Msenti Hub serves as the operational and entrepreneurial backbone of the KwaXolo ecosystem.

STEAM Center

Hub focused on Science, Technology, Engineering, Arts, and Mathematics (STEAM) to foster innovation and critical thinking.



Demographic Data and Information

Digital Literacy

The goal is sufficient technological competency for academic and professional use.

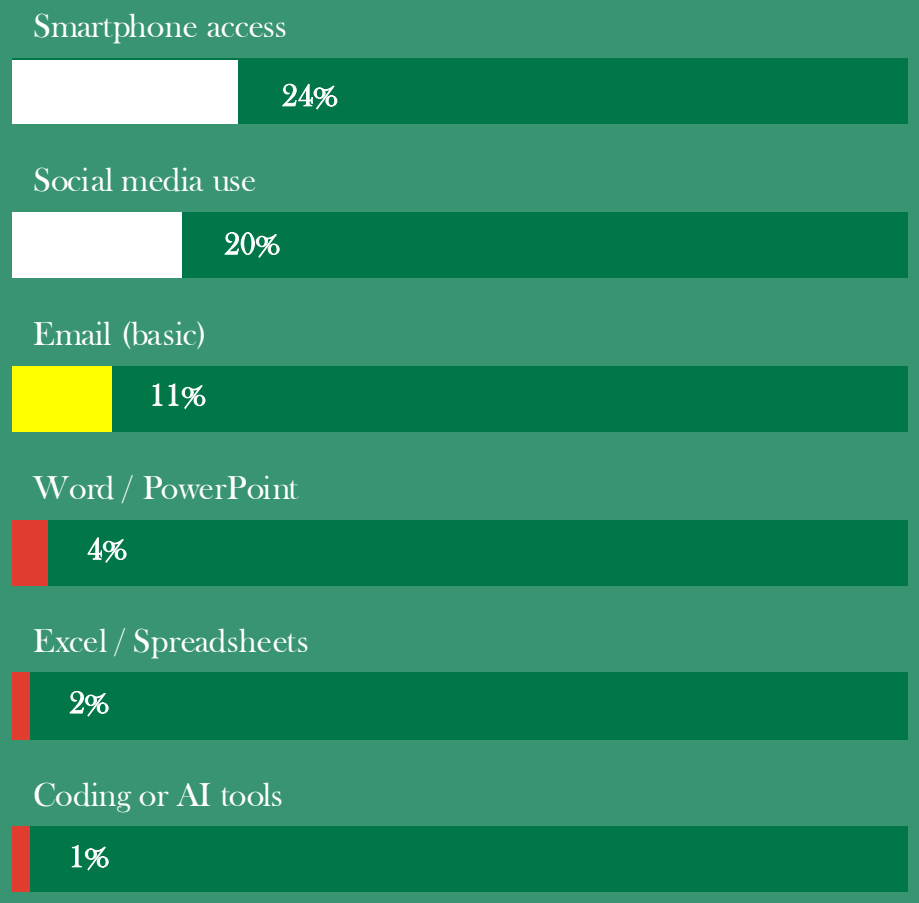
Not every student owns a smartphone, and those who do primarily use social media. Knowledge of productivity tools like Microsoft Word, PowerPoint and Excel is near zero across all nine schools.

Current state
Most students: social media only. No competency within academic and professional digital tools. Inconsistent internet access. 0 of 9 schools have functional computer labs with licensed software.

Target state
224 teachers + 6,000 students equipped with Word, PowerPoint, Excel, email and basic AI tools - skills that translate directly into employment and venture creation.

Digital Skills Gap

Estimated % of KwaXolo secondary school students with competency (field assessment 2025)



Source: KwaXolo Impact field assessment (estimated), 2025

IT Infrastructure, and What's Broken

Current state across 9 secondary schools in the KwaXolo region, KwaZulu-Natal

Connectivity

- 7 of 9 schools have no stable broadband connection
- SIM-card mobile data is the primary internet source
- Frequent outages disrupt any digital lessons
- Fibre rollout not projected before 2027 in the region

Hardware

- Average of ~12 functional computers per school
- Most devices are 8–12 years old
- 2 schools have zero functional computer labs
- Theft and vandalism reduce available stock each term

Software & Licenses

- No Microsoft 365 licenses currently deployed
- Pirated software in use - a significant security risk
- No LMS or digital learning platform in any school
- Google Classroom used informally in only 2 schools

Power & Physical Security

- Load-shedding (Eskom) interrupts up to 6 hours/day
- No UPS or solar backup installed in any school
- Device storage rooms lack adequate secure locks
- Single external IT contractor — no in-school capacity

Demographics in KwaZulu-Natal

Population

School Status KwaXolo 2026.01.28

What does this tell us?

Innate Entrepreneurial Drive

There is a profound drive for self-starting in KwaXolo. From students selling snacks outside school gates to formal business launches, the community actively seeks out opportunities to create value.

Proven Local Demand

Schools and local organizations have a consistent, unmet need for professional services; they prioritize local providers whenever the option is available.

High Execution Capability

When local talent is provided with the right tools and structured support, they move rapidly from idea to independent market traction and customer management.

Sustainable Economic Models

Local market rates, combined with low overhead costs, allow these ventures to achieve healthy margins and long-term viability quickly.

Closing Remarks

"Dear students,

You are now about to take on a challenge that matters beyond this room.
The nine schools and 6,000 students in KwaZulu-Natal are not a hypothetical - they are real young people whose access to opportunity depends, in part, on the kind of thinking you are about to do. I hope you carry that weight lightly, but carry it nonetheless.

There are no perfect answers here. What we are looking for is honest analysis, creative thinking, and solutions grounded in reality: cost-effective, sustainable, and built for communities that cannot afford to be let down.

Thank you for showing us what is possible."

/ Rolf Olsen
